Fireblocks
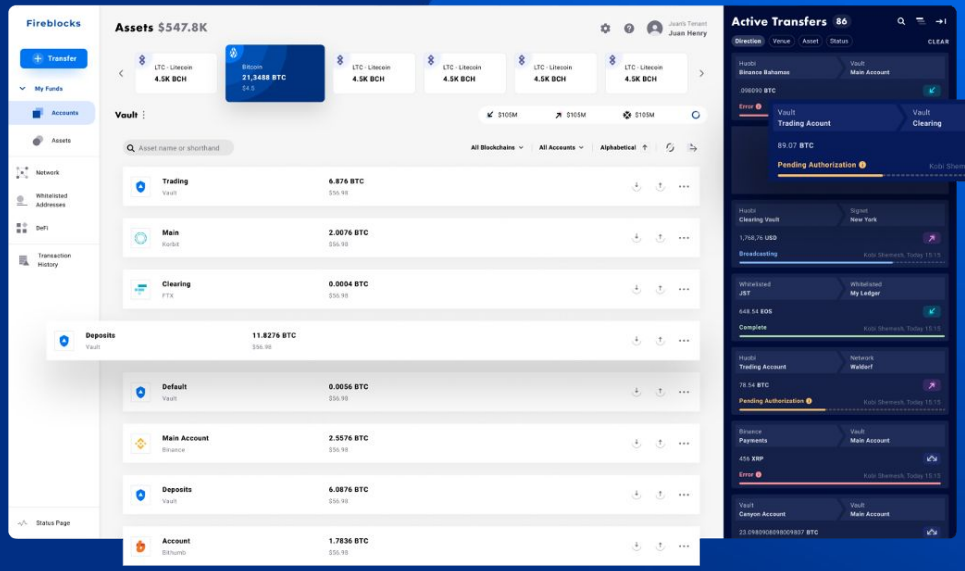
Platform



Fireblocks Platform

MPC-CMP wallet infrastructure with hot, warm and cold storage

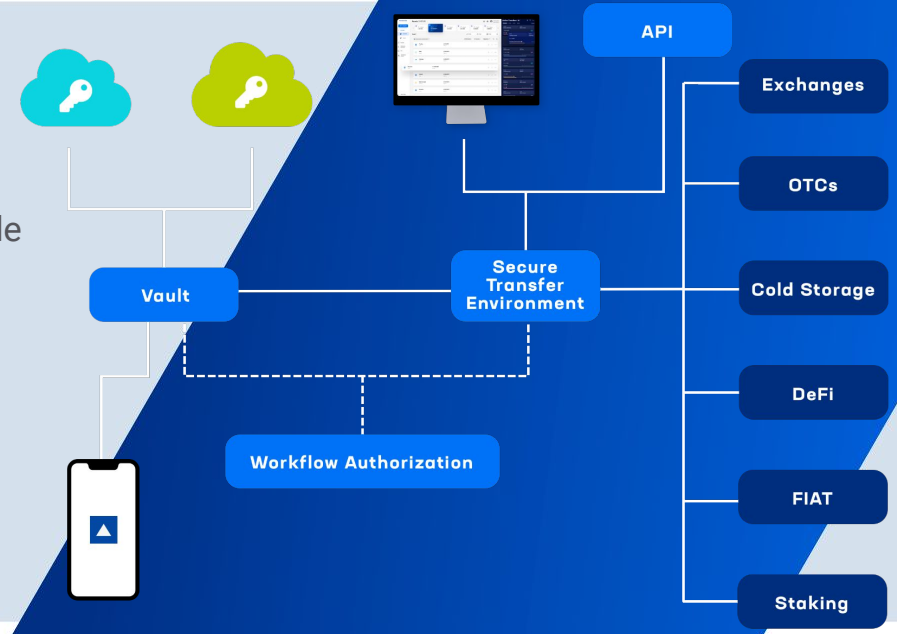
SGX hardware secured elements across Microsoft Azure and IBM Cloud

Automated policy engine segregates duties, enforces transfer workflows

Architecture & API

Develop on top of robust crypto architecture

- Use tech built for speed and scale: flexibility, wide compatibility and automated rails
- Build services on top of a multi-layer security infrastructure for custody and transfer



Next generation security and compliance

Integrate AML and KYT without slowing your operations

Dynamic compliance checks for all your transfers

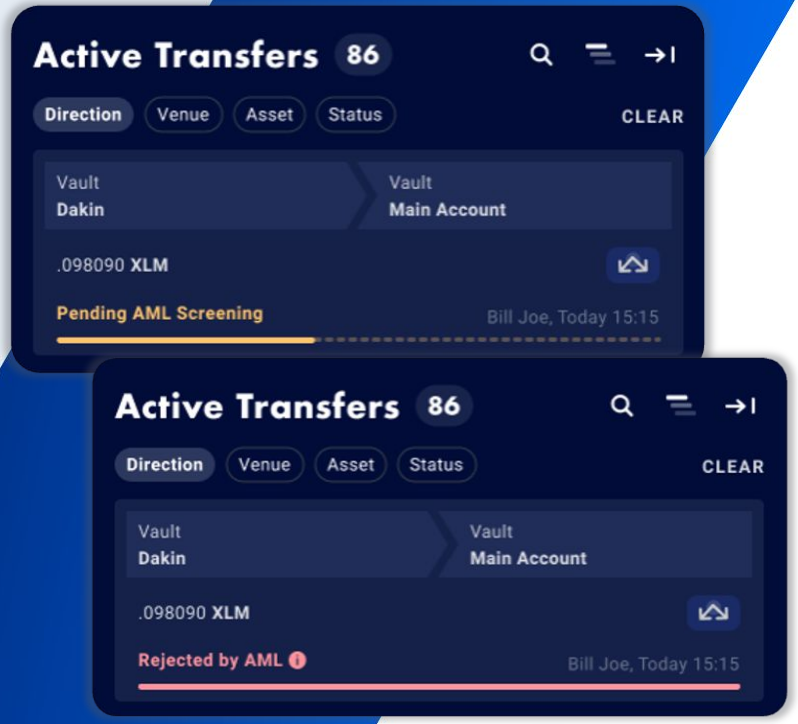
Understand the risks associated with your trading with automated AML/KYT transaction screening

Freezing of flagged funds with your workspace

Reduce your manual compliance workflows

Alerts on transfers initiated with illicit counterparties

Reporting through email, Slack and webhooks

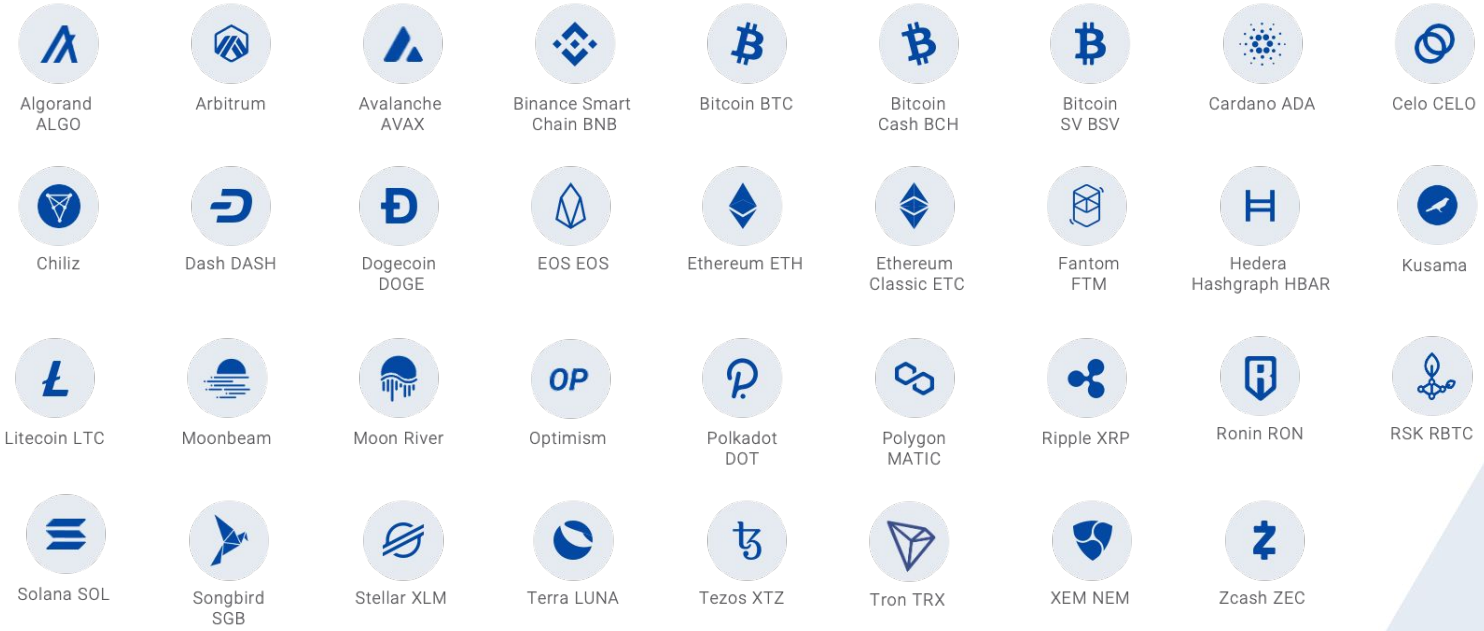


Chainalysis

ELLIPTIC

Broadest Asset Support: 1100+ Tokens and 35 Protocols

Industry's widest support. Top L1s & L2S. Auto ERC20 token support if its contract is triggered from a dApp.



Fireblocks

Thank you!
